

# Numerical Simulations of Fermi Bubbles

Curtis Peterson    Dr. Carl Gardner

ARIZONA STATE UNIVERSITY

**ARIZONA SPACE GRANT**

March 31, 2018

# Overview

- 1 What Are Fermi Bubbles?
- 2 Our Model
- 3 Results

# What Are Fermi Bubbles?

## Fermi Satellite Image

Fermi data reveal giant gamma-ray bubbles

Credit: NASA/DOE/Fermi LAT/D. Finkbeiner et al.

# What Are Fermi Bubbles?

## What We Know

Courtesy: NASA's Goddard Space Flight Center

## Fundamental Postulates

- The Milky Way hosted an active galactic nucleus (AGN)
- Fermi bubbles were created from an AGN event

# Our Model

## Euler Gas Dynamical Equations

Conservation of Mass

$$\partial_t \rho + \nabla \cdot (\rho \mathbf{u}) = 0$$

Conservation of Momentum

$$\rho(\partial_t \mathbf{u} + \mathbf{u} \cdot \nabla \mathbf{u}) + \nabla P = 0$$

Conservation of Energy

$$\partial_t E + \nabla \cdot (\mathbf{u}(E + P)) = -n^2 \Lambda(T)$$

# Our Model

## The Algorithm

- Gas is assumed to be dilute and monatomic ( $\gamma = 5/3$ )
- We utilize a WENO (weighted essentially non-oscillatory) numerical scheme
- The cooling,  $-n^2\Lambda$ , models H<sub>2</sub> and the 10 most abundant elements

# Our Model

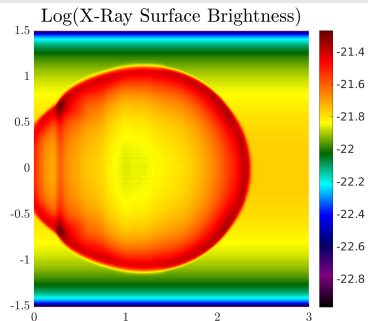

## Physical Parameters

Ambient	Bubble
$T_a = 10^6 \text{ K}$ $\rho_a = 1 \text{ H/cm}^3$	$T_b = 10^8 \text{ K}$ $\rho_b = 3 \cdot 10^{-5} \text{ H/cm}^3$ $v_b = 3 \cdot 10^4 \text{ m/s}$ $\tau_b = 2.3 \text{ Myr}$

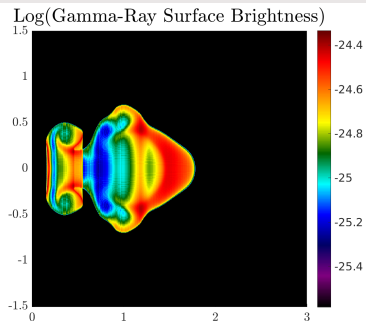

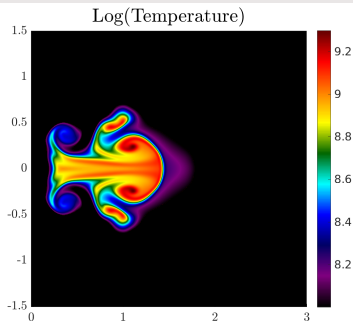

# Results

## X-Ray Surface Brightness

# Results

## Gamma-Ray Surface Brightness

# Conclusions

## Conclusions and Further Work

Success	Further Work
<ul style="list-style-type: none"><li>• Correct bubble topology</li><li>• Ambient and bubble temperatures</li><li>• Bulk cooling distribution</li></ul>	<ul style="list-style-type: none"><li>• Obtain proper x-ray surface brightness</li><li>• Obtain proper gamma-ray surface brightness</li></ul>

# Thank You
